Cloud Computing

Exercise-2 23MCCE11

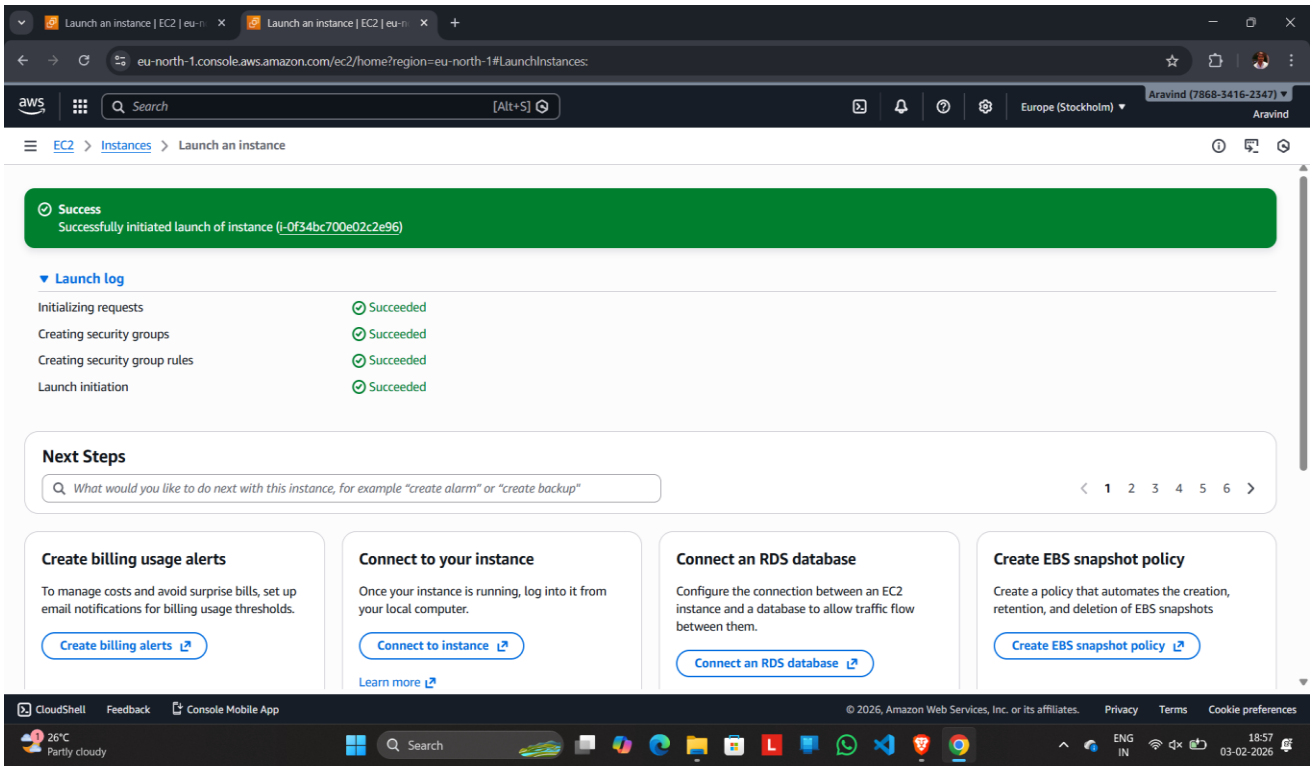

2.1 :

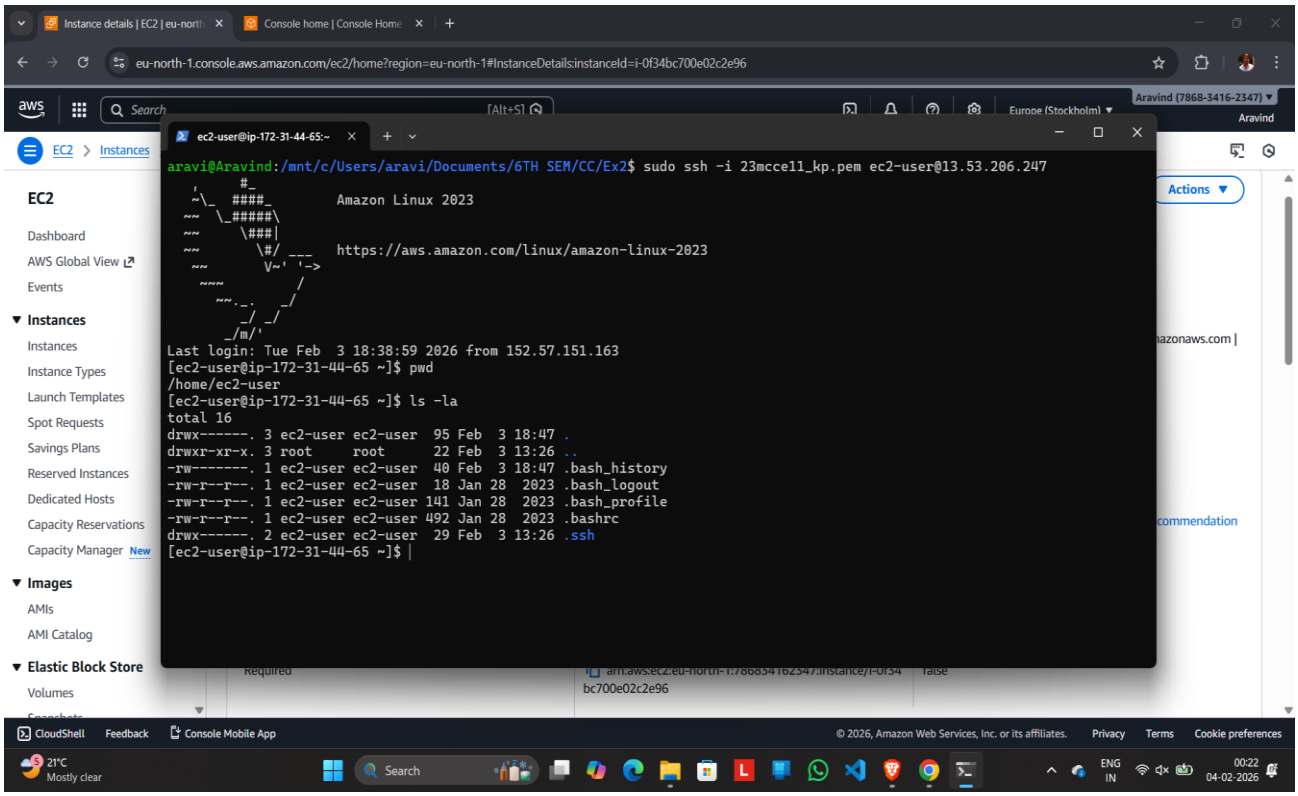

2.2:

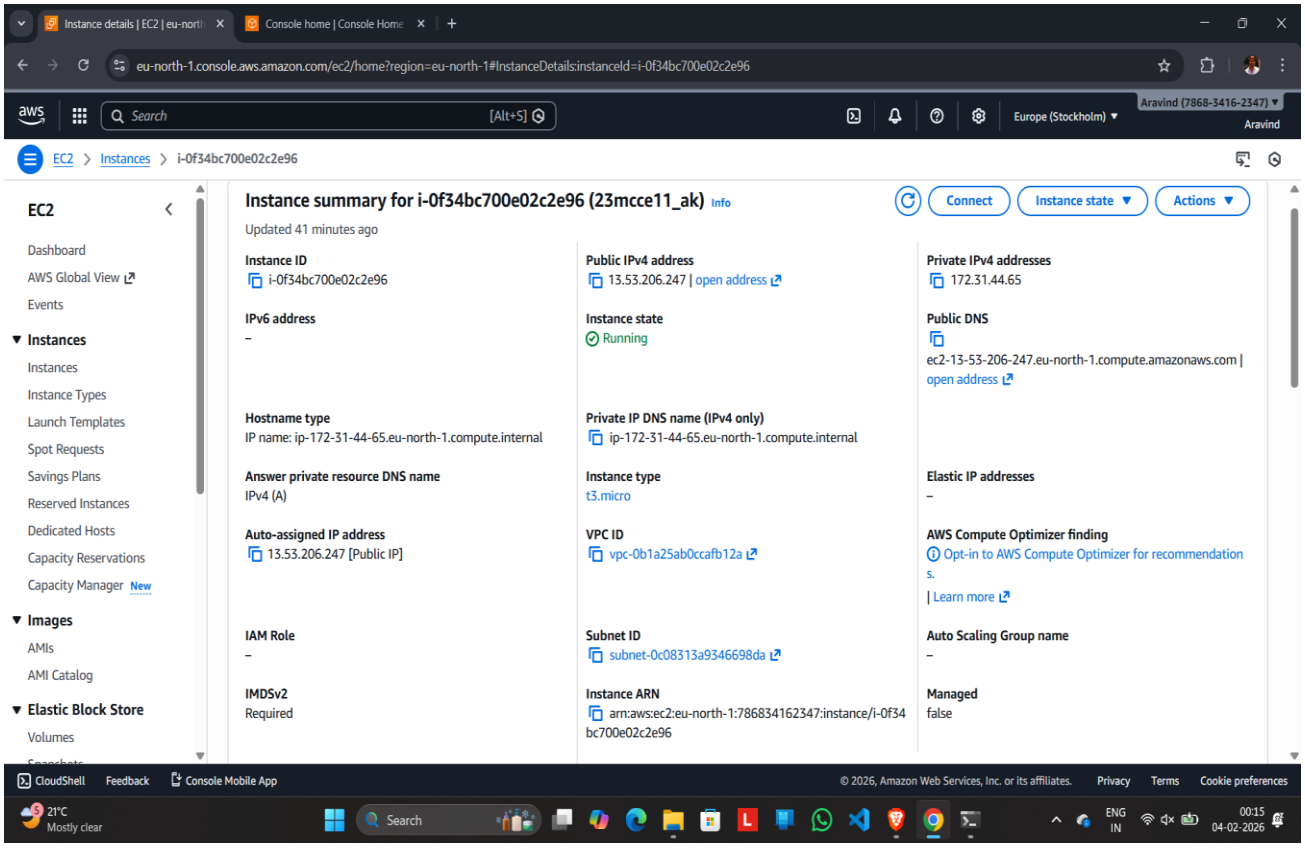

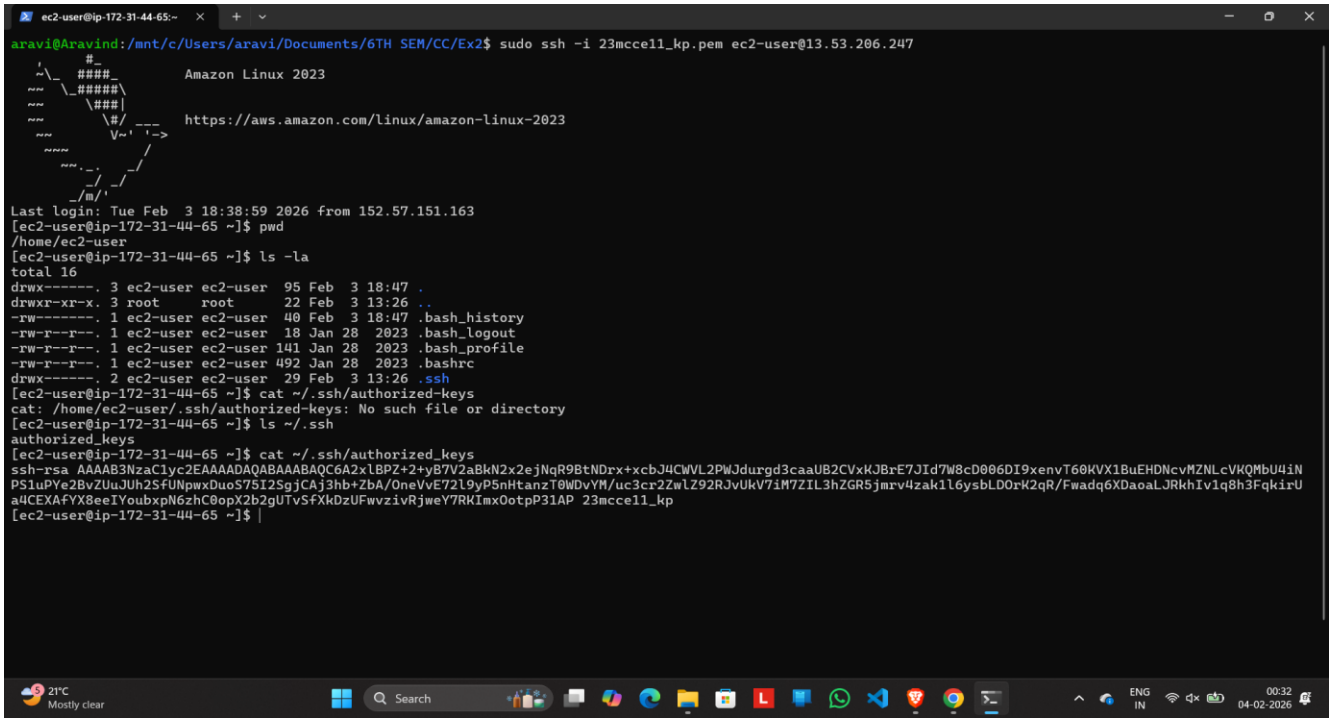

I created the instance in eu-north-1(Stockholm) instead Ohio which stated in exercise because, the key pairs are region specific I created 23mcce11_kp in Stockholm, so I created instance in Stockholm itself and another thing I choose which is different in exercise is distribution. I choose amazon Linux (I know it is ubuntu but I wanted to try this) thinking it is same as ubuntu but there are some differences which I wrote down below.

2.3:

I used wsl in windows to connect instead of putty(.ppk)

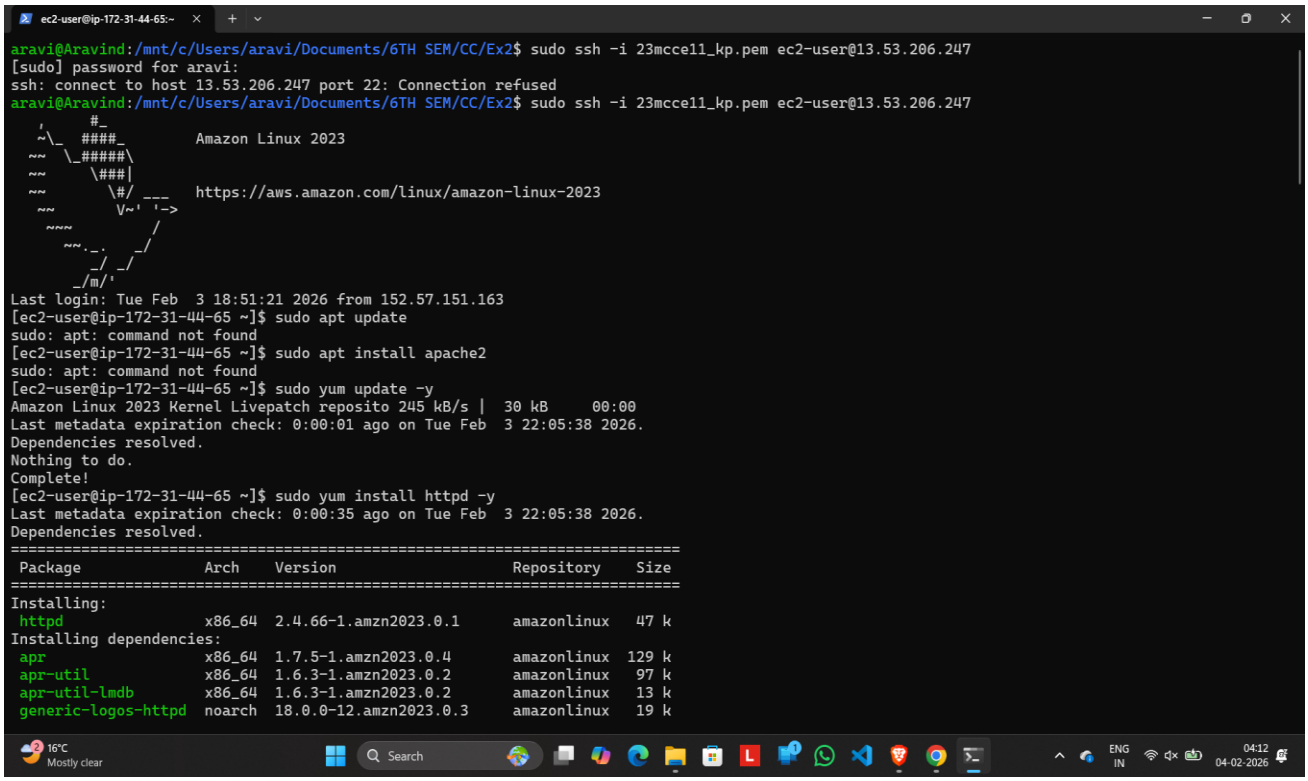

Here instead of ubuntu@IP we have to use ec2-user@IP for amazon linux

2.4:

Main problem with amazon Linux came here because, here we have to use yum/dnf (dnf is used in older versions) instead of apt and instead of apache = “httpd”.

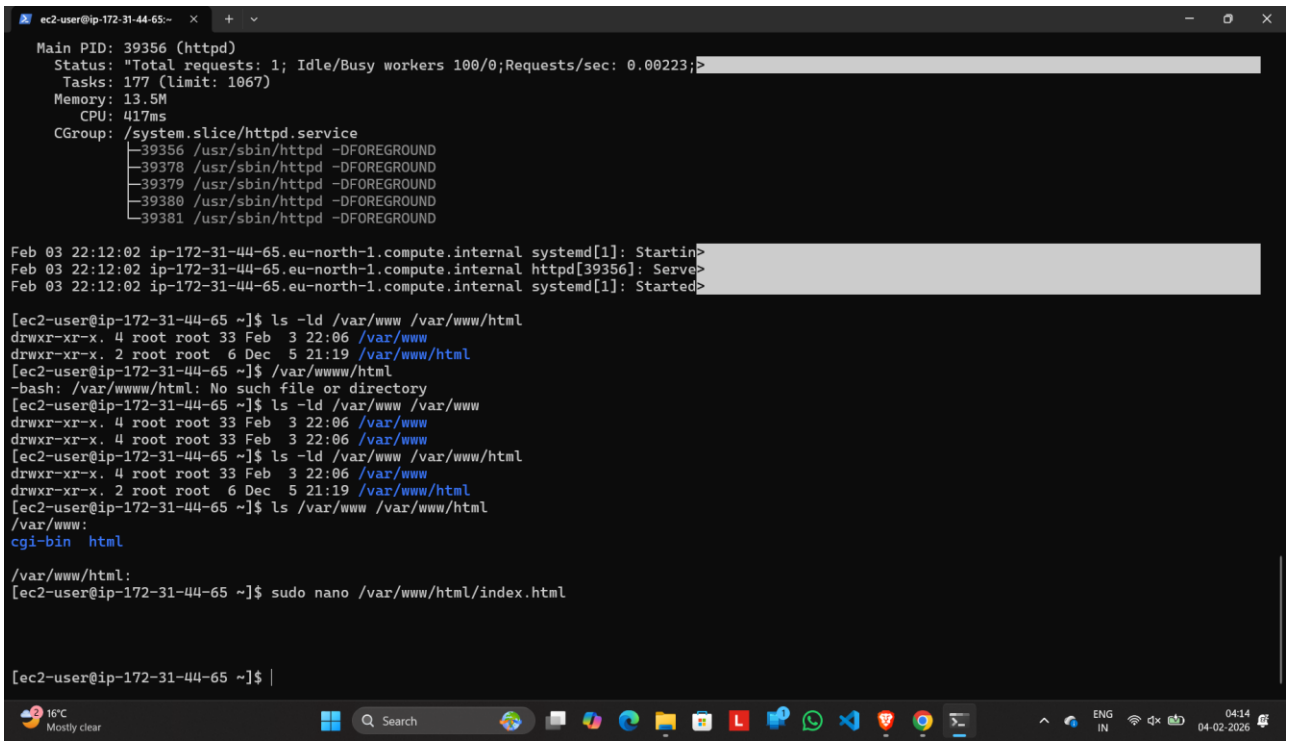

I used sudo yum update -y (-y to choose yes option directly) and sudo yum install httpd -y.

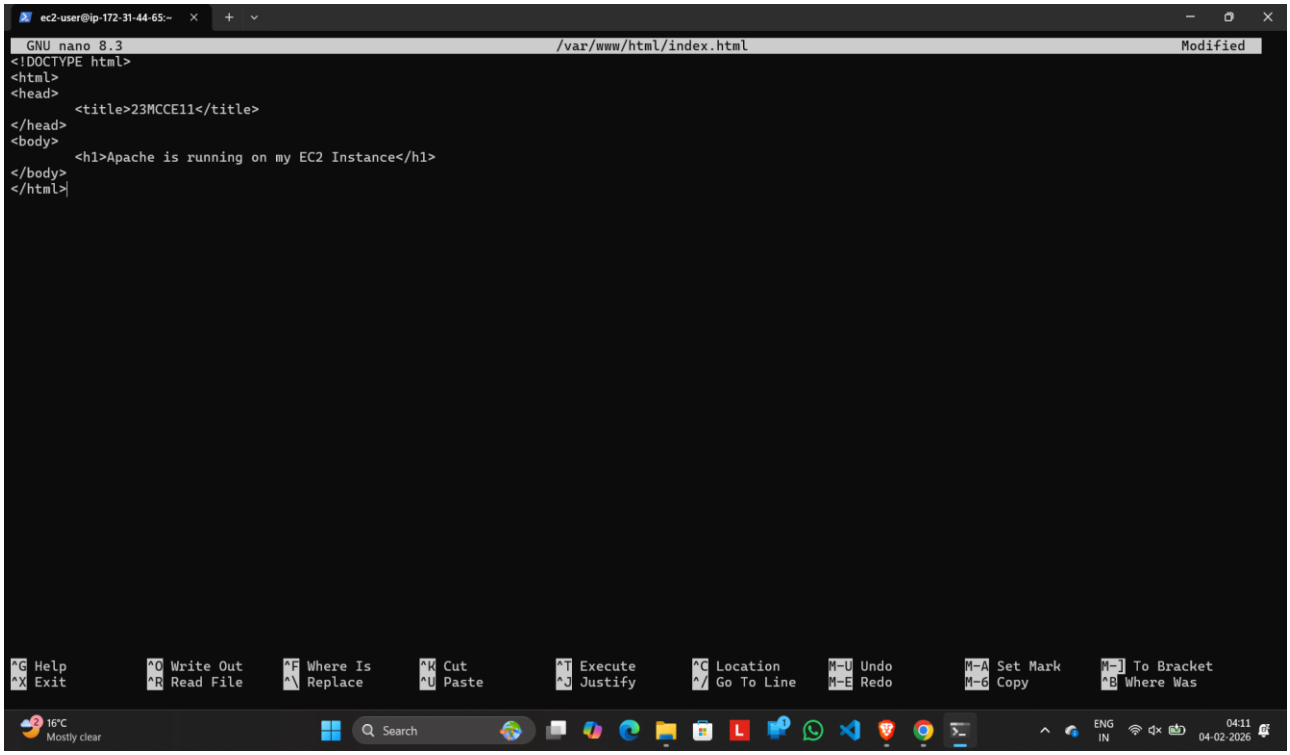

Contents of the File

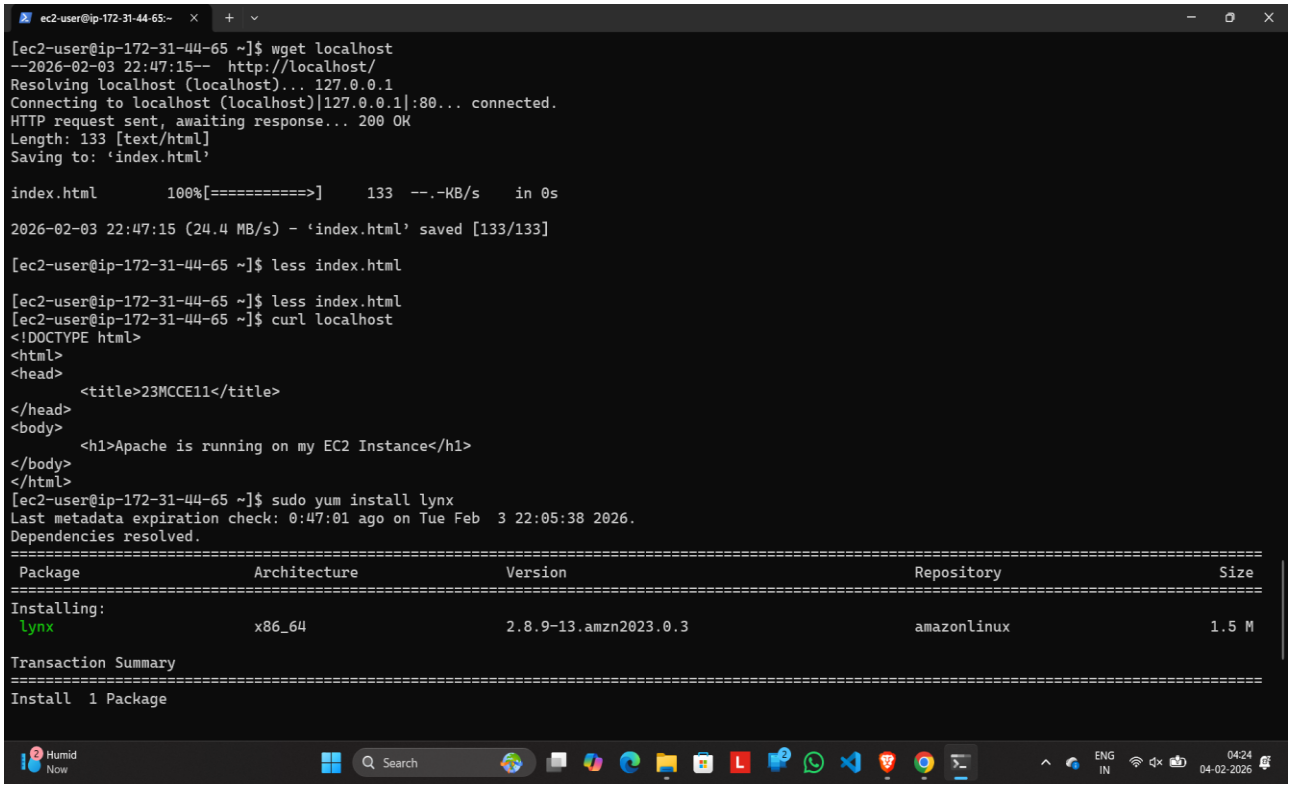

Unlike other distributions, Amazon Linux often **does not include** a physical `index.html` file by default.

Due to this I created my own index.html file in /var/www/html.

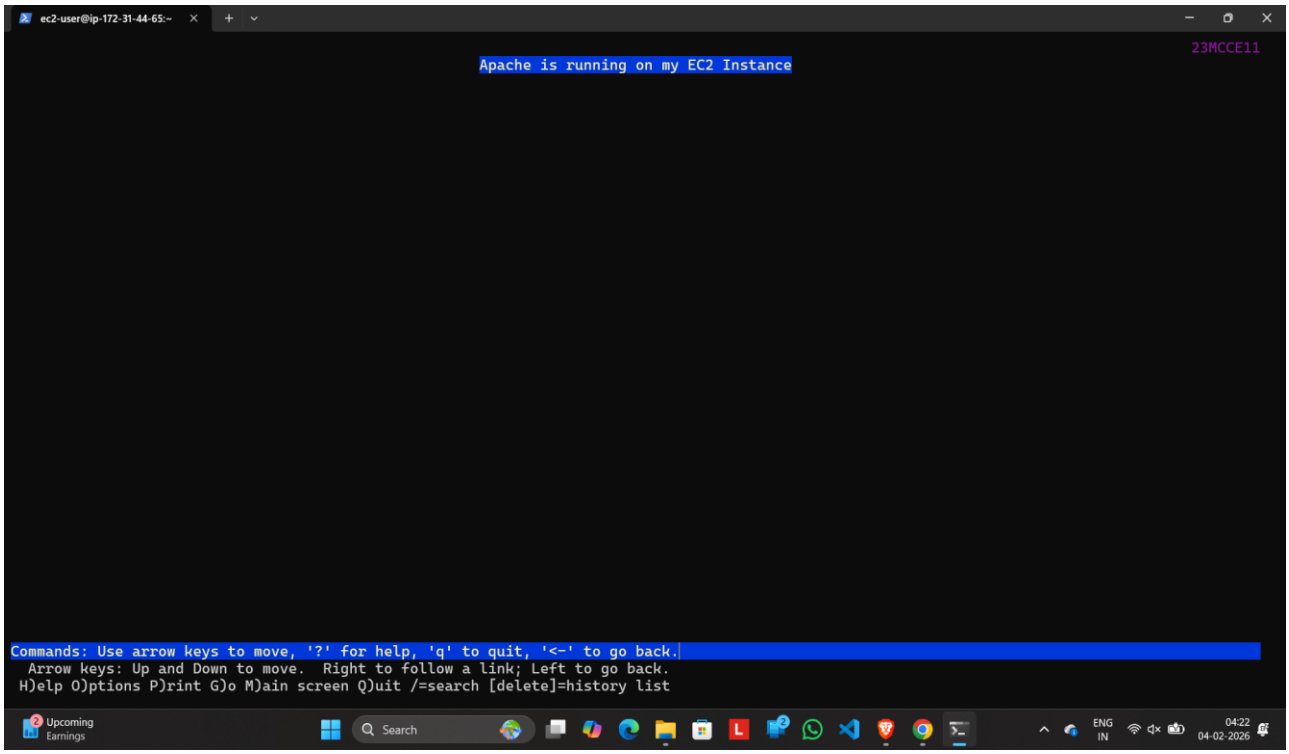

Above Image showing that there is no index.html file at /var/www/html.

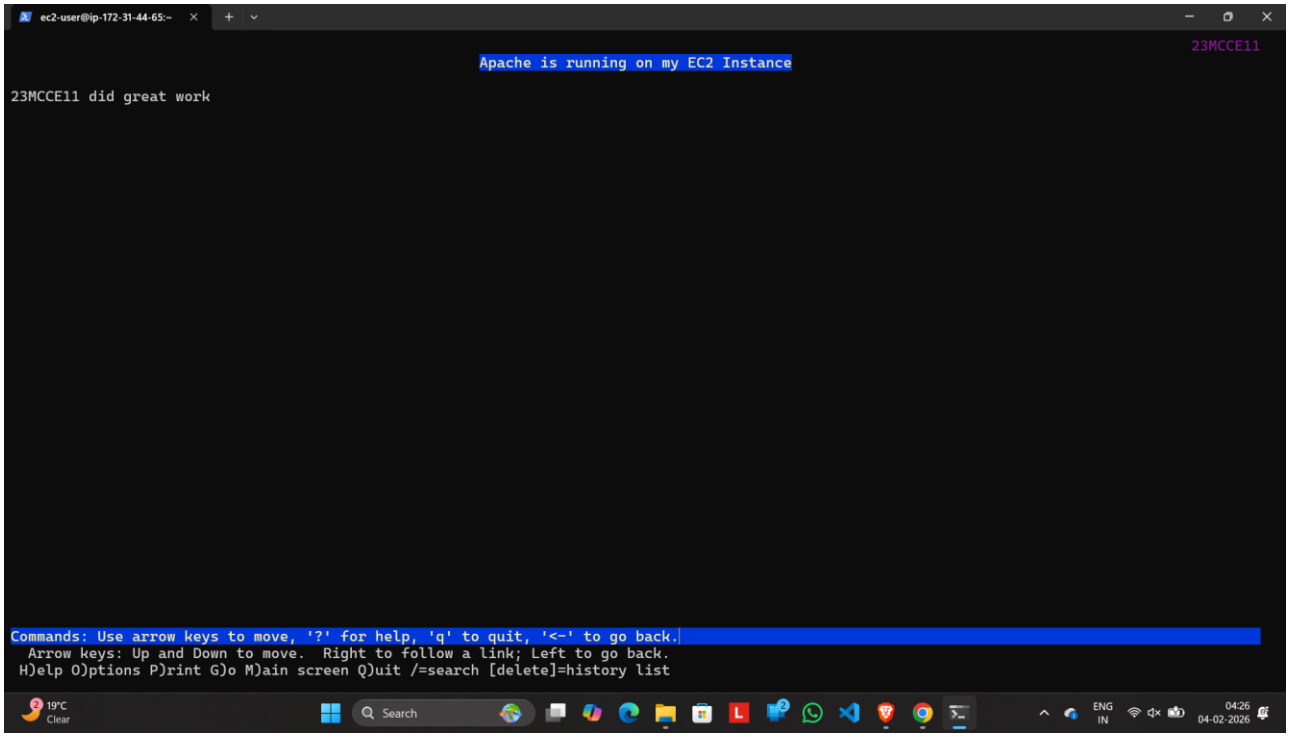

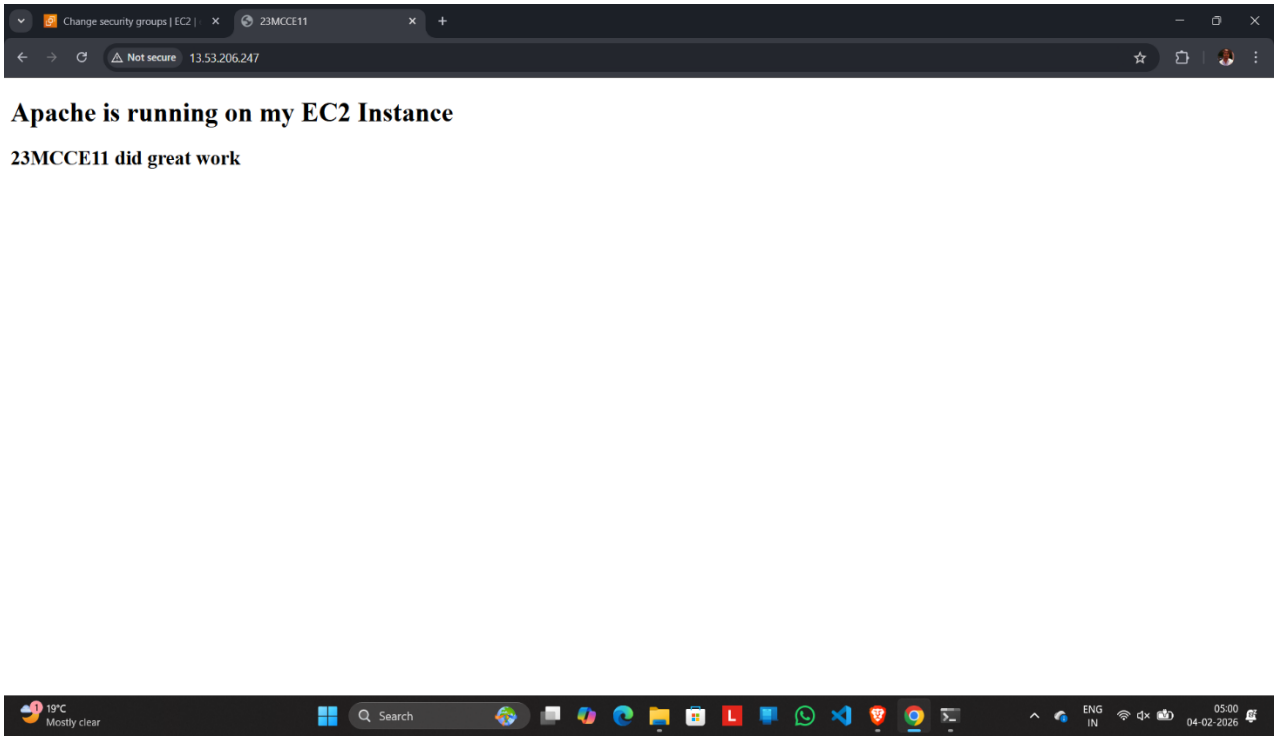

Below is lynx localhost.

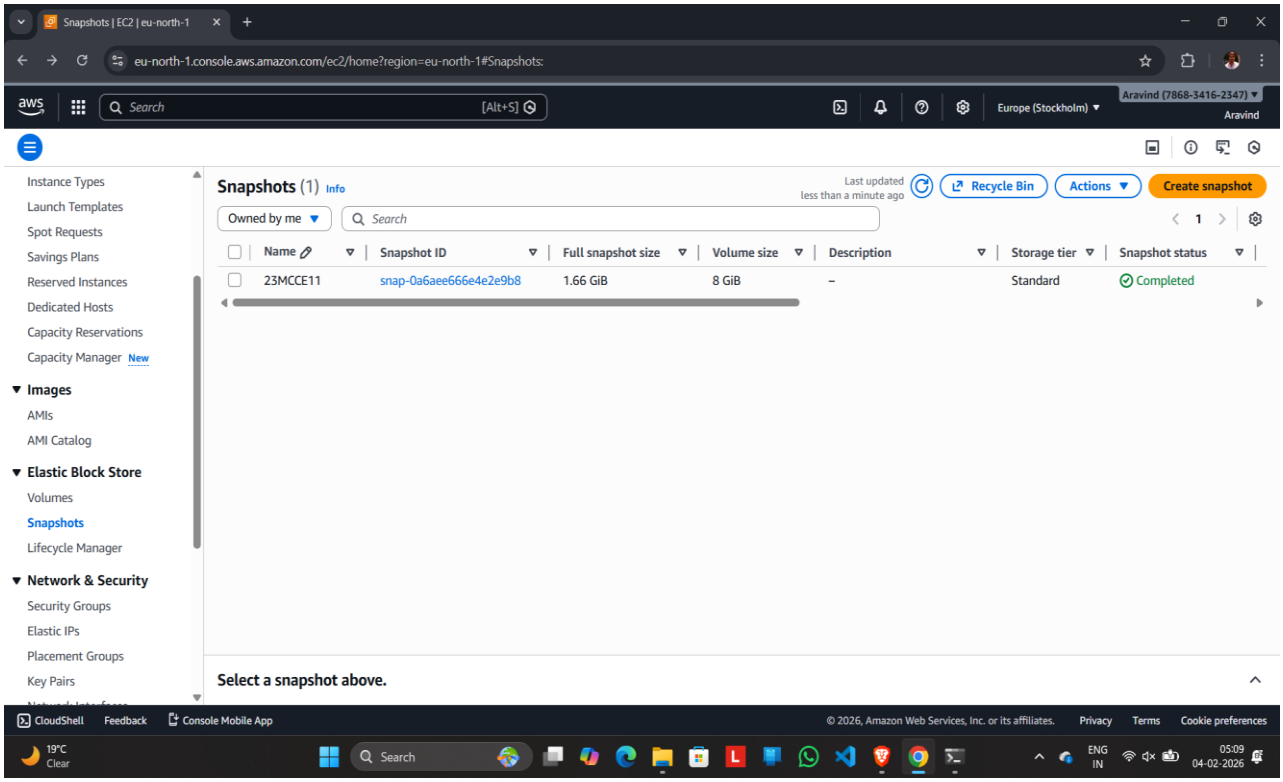

And again I changed the index.html file as mentioned in Exercise.

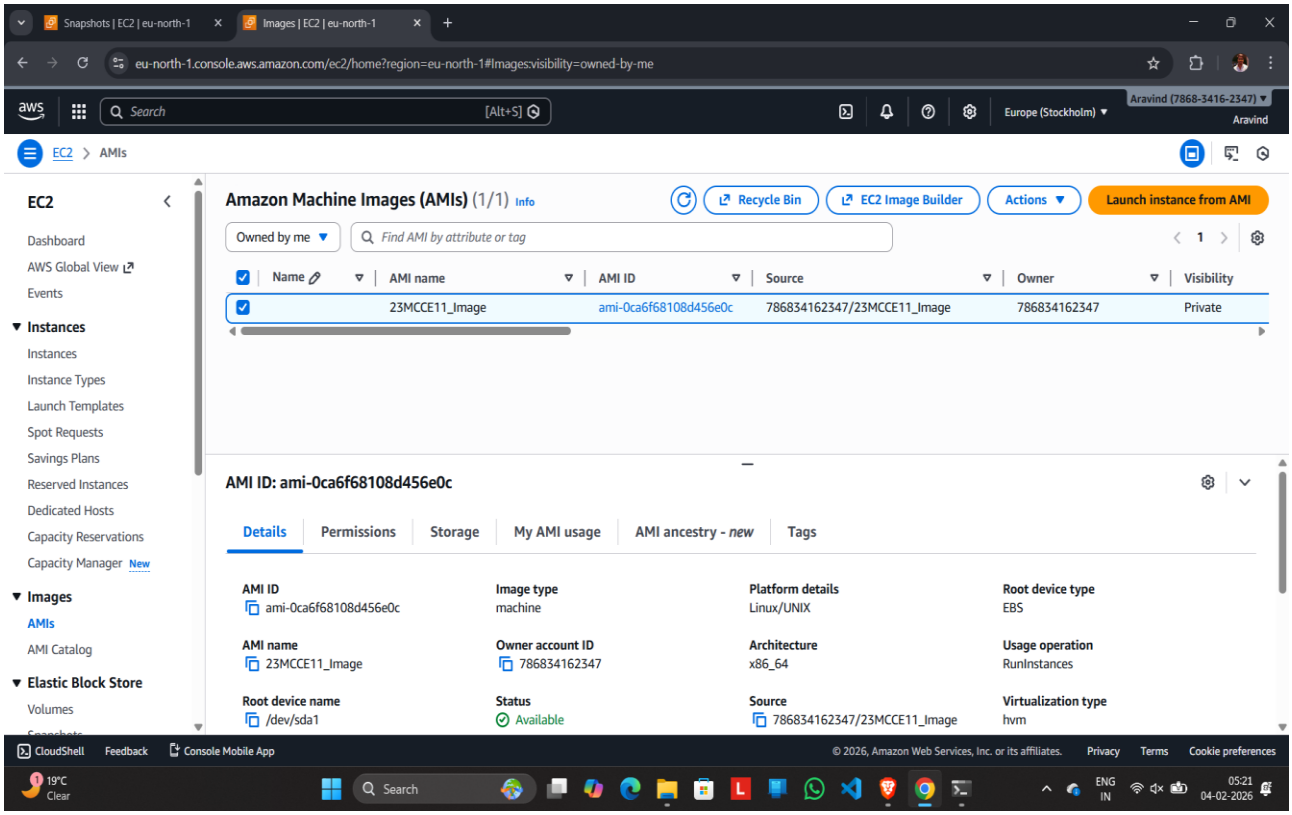

ec2-user@ip-172-31-44-65:~
23MCCE11
Apache is running on my EC2 Instance
23MCCE11 did great work
Commands: Use arrow keys to move, '?' for help, 'q' to quit, '<-' to go back.
Arrow keys: Up and Down to move. Right to follow a link; Left to go back.

Apache is running on my EC2 Instance

23MCCE11 did great work

Thank you
